 - Lige nu er der 29 investorer
- Organiserede Summit i oktober 2012

CASHC forskningsplan

Exhibit 1

Foundational and Cross-Cutting Themes

Source: The Conference Board of Canada.

Forskning – tre temaer

- Population Health
- The Functioning of the Health Care System
- Workplace Health and Wellness

Resultater af Summit on Sustainable Health and Health Care

1. Fix the gateway to the health care system. Primary care is the first contact point with the health care system. There was a strong consensus that interdisciplinary family care teams should be the standard model for primary care, and these teams should be expanded and strengthened in all provinces and territories.

2. Invest in and use technology more intensively in the health care system, particularly information technology

Resultater af Summit on Sustainable Health and Health Care

3. Change health professional

compensation – link it to patient outcomes, not to activities like treatment or consultation

4. Build an appropriate support system to

care for the elderly - Few older Canadians want to be hospitalized for chronic conditions. They want to be cared for and healed where they live: in their homes and communities.

5. Improve the state of Canadians' overall

health and wellness – create a 'wellness system' as well as a health care system, i.e. create a healthier population, role for employers.

Mulige diskussionsemner

- Hvordan udvikles forskningsplanen med hver investor?
- Hvordan sikrer de at resultaterne bliver anvendt?
